PROFESSIONAL SUMMARY

Knowledge management professional with hands-on experience building Claude- and Copilot-powered prompts, templates, workflows, and process documentation, including a Copilot workflow that raised team drafting throughput 2.3x. Focused on AI implementation, workflow automation, and process improvement across support and documentation functions.

AREAS OF EXPERTISE

AI Operations & Implementation · Workflow Automation · Process Improvement · Business Improvement · Prompt Engineering · Information Architecture · Content Governance · Process Documentation · Chatbot & AI Agent Enablement · AI Tool Evaluation · User Training & Enablement · Continuous Improvement · Knowledge Management

TECHNOLOGY STACK

Claude · ChatGPT · Microsoft 365 Copilot · Power Automate · Salesforce Knowledge · Confluence · Jira · GitHub · HTML/CSS · Microsoft 365

KEY ACHIEVEMENTS

Led three cross-functional AI and documentation initiatives end-to-end, spanning workflow design, measurement, governance, and team enablement.

- Designed and maintained AI-powered prompts, templates, and workflows for a two-agent Copilot production system with a human review checkpoint, separating content generation from deterministic formatting and adding QA gates and audit logs as process documentation. Increased team drafting throughput 2.3x.
- Built a nine-tab AI productivity measurement system that isolated active work time from cycle time and normalized output by task complexity, turning AI adoption claims into defensible evidence for improvement decisions.
- Designed the knowledge lifecycle and governance framework for the KM function, including SLAs, KPI definitions, escalation paths, and Jira conventions, establishing a single source of truth for the team.

PROFESSIONAL EXPERIENCE

Sovos | Knowledge Management Analyst

Jun 2025 – Present

- Own content strategy for the KM function, defining how content is structured across the help center, knowledge base, chatbot training data, and macros to serve both AI and human workflows.
- Support development and training of a knowledge-based chatbot by structuring source content, identifying knowledge gaps, and evaluating answer quality; recommended a metadata-first taxonomy serving the chatbot and a second knowledge system.
- Migrated and restructured legacy content into Salesforce Knowledge with SMEs and Support leads, producing dual-purpose content for the customer-facing help center and structured chatbot training data.
- Built team pages and new-hire onboarding materials covering tools, workflows, standards, and responsibilities, and ran walkthrough sessions to explain technical concepts to non-technical users.

Accenture, Inc. | Technical Content Writer, Knowledge Management

May 2023 – May 2025

- Applied AI tools to accelerate content generation and editing, establishing repeatable processes that improved output consistency across the team.
- Defined and maintained the content architecture for help center documentation, knowledge base entries, internal announcements, and canned responses, accountable for how it was organized and how it performed.
- Restructured information architecture across support surfaces to reduce resolution time and improve self-service rates, using content performance signals to prioritize improvements.

Accenture, Inc. | App/Cloud Support Associate

Dec 2022 – May 2023

- Supported Microsoft 365 users across software, hardware, and connectivity issues, turning recurring support patterns into reusable troubleshooting articles and how-to guides that reduced repeat tickets.

EDUCATION & CERTIFICATIONS

Notre Dame of Dadiangas University | BS Electronics Engineering, 2020 | General Santos City, Philippines

Prompt Design in Vertex AI, Google Cloud (2024) · Google Data Analytics Professional Certificate, Coursera (2022) · Azure Fundamentals, Microsoft (2021)
